Technical Blog | Kannur, Kerala, India

Professional Summary

Software Engineer with experience building production systems for commerce and marketing automation. Skilled in Node.js, TypeScript, NestJS, React, PostgreSQL, MongoDB, Redis, and AWS. Experienced in REST API development, third-party integrations, transaction-safe workflows, asynchronous processing, and production reliability.

Professional Experience

Backend Engineer | DiarchGo June 2026 - Present

- Engineered transaction-safe order, delivery, inventory, and refund workflows using NestJS, TypeScript, and MongoDB transactions, preventing duplicate operations and inconsistent state transitions.
- Built Redis-backed BullMQ workers and scheduled reconciliation to recover stale refund jobs, using a 60-second sweep interval and a 10-minute stale-job threshold.
- Implemented refund eligibility validation against order balances and existing refund records to prevent concurrent requests from exceeding refundable amounts.
- Developed two administrative delivery-recovery APIs with JWT authentication, role-based access control across four operational roles, and auditable actor attribution.
- Redesigned push notification workflows integrated with Socket.IO real-time events, improving Android notification delivery from 20% to 90% and iOS delivery from 0% to 80%.
- Decoupled notifications and real-time event emission from committed database operations, isolating communication failures from critical business transactions on a live quick-commerce platform with 50K+ downloads
- Migrated web application hosting from Amazon EC2 to AWS Amplify, simplifying deployment and release workflows.

Junior Software Engineer | Sipify Apps Private Limited Sep 2025 - May 2026

- Architected and developed backend services for a marketing automation platform using NestJS, TypeScript, PostgreSQL, DynamoDB, AWS SQS, and Lambda.
- Built event-driven AI workflows integrating Google Gemini and Meta Marketing APIs to generate, validate, and manage audience targeting data.
- Designed multi-database systems and domain validation frameworks that enforced complex advertising business rules and improved platform reliability.
- Implemented OAuth 2.0 onboarding and token lifecycle management for large-scale Meta account integrations.
- Engineered ledger-based payment and credit infrastructure integrating Stripe and Razorpay with idempotent transaction processing and reconciliation.
- Developed production-grade Next.js applications with complex state management, authentication, and real-time operational workflows.

Projects

Telegram Bot to Automate QR Code Generation github.com/telegram-bot

- Developed a Python-based Telegram bot that integrates with external APIs to retrieve user-specific data and generate QR codes.
- Automated scheduled data retrieval and QR-code generation using cron jobs; deployed on Render with health checks.

Technical Skills

- **Programming Languages :** TypeScript, JavaScript, Python, SQL, C
- **Backend Technologies :** NestJS, Node.js, Express.js, REST APIs, OAuth 2.0, JWT
- **Frontend Technologies :** Next.js, React.js, React Query, Zustand, HTML, CSS
- **Databases & Caching :** PostgreSQL, MongoDB, DynamoDB, Redis
- **Cloud & Devops :** AWS Lambda, AWS SQS, AWS Amplify, Git, GitHub, CI/CD, Linux
- **Queues & Asynchronous Processing :** BullMQ, event-driven workflows, background jobs
- **AI & Integrations :** Google Gemini API, Meta Marketing API, Stripe, Razorpay
- **Engineering Practices :** Database transactions, idempotency, concurrency control, debugging

Education

APJ Abdul Kalam Technological University, B-Tech in Computer Science 2021 – 2025

- CGPA: 8.15/10
