Agnav P

SOFTWARE ENGINEER — NODE.JS · NESTJS · TYPESCRIPT · NEXT.JS · POSTGRESQL · AWS

Kannur, Kerala, India | +91-6238077599 | pagnav03@gmail.com | LinkedIn | GitHub | Portfolio | Technical Blog

PROFESSIONAL SUMMARY

Software Engineer with 1+ year of experience building production systems for commerce and marketing automation using Node.js, NestJS, TypeScript, PostgreSQL, MongoDB, Redis, and AWS, complemented by frontend experience with React and Next.js. Skilled in REST API development, third-party integrations, transaction-safe workflows, asynchronous processing, and production reliability. Shipped backend systems for a live quick-commerce platform with **50K+** downloads and integrated **4** third-party APIs (Stripe, Razorpay, Google Gemini, Meta Marketing); also built a Python Telegram bot that automates QR code generation with scheduled cron jobs.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, C
Frontend: Next.js, React.js, React Query, Zustand, HTML, CSS
Backend & APIs: NestJS, Node.js, Express.js, REST APIs, OAuth 2.0, JWT
Databases & Caching: PostgreSQL, MongoDB, DynamoDB, Redis
Cloud & DevOps: AWS Lambda, AWS SQS, AWS S3, AWS Amplify, Git, GitHub, CI/CD, Linux
Queues & Async Processing: BullMQ, Event-Driven Workflows, Background Jobs
AI & Integrations: Google Gemini API, Meta Marketing API, Stripe, Razorpay
Engineering Practices: Database Transactions, Idempotency, Concurrency Control, Debugging

PROFESSIONAL EXPERIENCE

› Backend Engineer — June 2026 – Present

DiarchGo

DiArchGo — Quick-Commerce Platform (Live production system)

Tech: NestJS, TypeScript, MongoDB, Redis, BullMQ, Socket.IO, JWT, AWS S3, AWS Amplify

- Engineered transaction-safe order, delivery, inventory, and refund workflows across **4** core domains using NestJS, TypeScript, and MongoDB transactions, preventing duplicate operations and inconsistent state transitions.
- Redesigned push notification workflows integrated with Socket.IO real-time events, improving Android delivery from **20% to 90%** and iOS delivery from **0% to 80%**.
- Reduced dashboard loading time by **40%** by developing customer-order analytics APIs with order-tier segmentation and optimized queries.
- Cut database load by **60%** by improving Redis TTL and cache-aside behavior, while delivering inventory-driven restock notifications without duplicate triggers.
- Prevented HTTP timeouts on exports of **2,000+** records by building asynchronous exports with background workers, AWS S3, and email notifications.
- Built Redis-backed BullMQ workers with scheduled reconciliation to recover stale refund jobs, using a **60-second** sweep interval and a **10-minute** stale-job threshold.
- Implemented refund eligibility validation against order balances and existing refund records, preventing concurrent requests from exceeding refundable amounts.
- Developed **2** administrative delivery-recovery APIs with JWT authentication, role-based access control across **4** operational roles, and auditable actor attribution.
- Decoupled notifications and real-time event emission from committed database operations, isolating communication failures from critical business transactions on a platform with **50K+** downloads.
- Migrated web application hosting from Amazon EC2 to AWS Amplify, simplifying deployment and release workflows.

› Junior Software Engineer — Sep 2025 – May 2026

Sipify Apps Private Limited

Marketing Automation Platform (Production SaaS)

Tech: NestJS, TypeScript, Next.js, PostgreSQL, DynamoDB, AWS SQS, Lambda, Stripe, Razorpay, Gemini, Meta Marketing API

- Architected backend services for a marketing automation platform using NestJS, TypeScript, AWS SQS, and Lambda across **2** databases (PostgreSQL, DynamoDB), enforcing complex advertising business rules through domain validation frameworks.
- Built event-driven AI workflows integrating **2** external APIs (Google Gemini, Meta Marketing) to generate, validate, and manage audience targeting data.
- Implemented OAuth 2.0 onboarding and token lifecycle management for large-scale Meta account integrations.
- Engineered ledger-based payment and credit infrastructure integrating **2** gateways (Stripe, Razorpay) with idempotent transaction processing and reconciliation.
- Developed production-grade Next.js applications with complex state management, authentication, and real-time operational workflows.

EDUCATION

B.Tech in Computer Science · APJ Abdul Kalam Technological University · CGPA: **8.15/10** — 2021 – 2025
